

ADHD Rating Scale (Child / Adolescent) (ADHD-RS)

The ADHD-RS is a standardized rating scale that measures the severity of attention-deficit/hyperactivity disorder (ADHD) symptoms in children and adolescents, based on DSM-5 criteria. It is usually completed by a parent or teacher and is used for diagnosis, monitoring, and evaluating the effectiveness of interventions.

Number of questions	18 questions
Estimated duration	4 minutes
Language	English
Original name	ADHD Rating Scale
Target audience	Children and adolescents
Authors	George J. DuPaul, Thomas J. Power, Arthur D. Anastopoulos, Robert Reid (2016)

Scoring & interpretation

Each item is rated on a scale from 0 (never or rarely) to 3 (very often). The inattention and hyperactivity/impulsivity subscale scores are added together to obtain a total score. A higher score indicates greater severity of ADHD symptoms.

Usage

This tool isn't available on Mentaal. To use this questionnaire in your practice, you need a valid license. We invite you to send it directly from the publisher's website.
