

Autism Diagnostic Interview-Revised (ADI-R)

The ADI-R is a structured interview scale designed to diagnose autism spectrum disorder. It provides an in-depth assessment of behavioral and communication disorders through an interview with the patient's parents or relatives.

Number of questions	93 questions
Estimated duration	90 minutes
Language	English
Original name	Autism Diagnostic Interview
Target audience	Children, adolescents, adults
Authors	M. Rutter, A. Le Couteur, C. Lord (2011)
Category	Autism spectrum

Administer your questionnaires online

Send your patient a link: they answer from their phone or computer, and you receive the scored results by email.

Scoring & interpretation

Responses are scored and used to determine scores in different subdomains, such as reciprocal social interaction, communication, and restricted and repetitive behaviors, in order to guide the diagnosis.

Usage

This tool isn't available on Mentaal. To use this questionnaire in your practice, you need a valid license. We invite you to send it directly from the publisher's website.
