

Conners Comprehensive Behavior Rating Scales (CBRS)

The Conners Comprehensive Behavior Rating Scales (CBRS) are used to identify and assess attention-deficit/hyperactivity disorder (ADHD) in children and adolescents. The test helps estimate the severity and frequency of ADHD symptoms as well as other emotional and behavioral problems.

Number of questions	203 questions
Estimated duration	15 minutes
Language	English
Original name	Conners Comprehensive Behavior Rating Scales
Target audience	Children, adolescents
Authors	C. Keith Conners (2008)
Category	ADHD

Administer your questionnaires online

Send your patient a link: they answer from their phone or computer, and you receive the scored results by email.

Scoring & interpretation

Scoring uses a Likert-type scale for each item. Total scores and subscale-specific scores make it possible to determine the presence and intensity of ADHD symptoms and other associated disorders.

Usage

This tool isn't available on Mentaal. To use this questionnaire in your practice, you need a valid license. We invite you to send it directly from the publisher's website.
