

Conners 3rd Edition (Conners 3)

The Conners 3 is a multidimensional questionnaire designed to assess the symptoms of attention-deficit/hyperactivity disorder (ADHD), as well as other behavioral and emotional problems in children and adolescents. It offers different versions depending on the informant: parent, teacher, and self-report by the young person (adolescent). It provides detailed profiles that help refine diagnosis and intervention.

Number of questions	110 questions
Estimated duration	20 minutes
Language	English
Original name	Conners 3rd Edition
Target audience	Children, adolescents
Authors	C. Keith Conners (2008)
Category	ADHD

Preview of the 110 questions

Scoring & interpretation

Each item is rated on a frequency scale (for example, never, sometimes, often, very often). Raw scores are calculated and then converted into T-scores normed by age and sex. Interpretation is based on comparison with the recommended cutoffs to guide the assessment toward a diagnosis of ADHD or related problems.

Usage

This tool isn't available on Mentaal. To use this questionnaire in your practice, you need a valid license. We invite you to send it directly from the publisher's website.
