

Conners Early Childhood (EC)

The Conners Early Childhood (EC) is an assessment instrument designed to measure various aspects of development and behavior in young children, mainly between the ages of 2 and 6. It helps identify behavioral and emotional problems, as well as early signs of developmental disorders. It includes parent and teacher versions in order to obtain a complete picture of the child's functioning across different settings.

Number of questions	190 questions
Estimated duration	20 minutes
Language	English
Original name	Conners Early Childhood
Target audience	Children aged 2-6
Authors	C. Keith Conners (2014)
Category	Childhood

Administer your questionnaires online

Send your patient a link: they answer from their phone or computer, and you receive the scored results by email.

Scoring & interpretation

Responses are given on a Likert-type scale for each item. The items are divided into different subscales (behavior, development, health), and total scores and indexes are calculated for each domain. Results are interpreted according to age and sex norms, indicating whether a child falls within the average range or has clinically significant scores.

Usage

This tool isn't available on Mentaal. To use this questionnaire in your practice, you need a valid license. We invite you to send it directly from the publisher's website.

★★★★★

“It's a real plus in sessions to assess the patient, and a very rich basis for discussion to deepen the clinical work.”

 Elodie C. - CBT Psychologist
