

# Multiscore Depression Inventory for Children (MDI-C)

The MDI-C is a self-report scale designed to measure the severity of depressive symptoms in children and adolescents. It assesses different domains of depression through several subscales, thus providing a detailed symptom profile.

## Scoring & interpretation

Each item is rated on a Likert-type scale. Scores are summed to obtain an overall score as well as subscores by domain. Specific cutoffs determine the presence and severity of depressive symptoms.

## Usage

This tool isn't available on Mentaal. To use this questionnaire in your practice, you need a valid license. We invite you to send it directly from the publisher's website.
