

Mini International Neuropsychiatric Interview — Suicidality Module (MINI-Suicide)

The MINI suicidality module is part of a structured interview used to detect major psychiatric disorders and to specifically assess suicide risk. This module allows a rapid assessment of suicidal ideation and behaviors, useful in clinical practice and research. It is administered by a clinician or a trained professional.

Scoring & interpretation

Each question assessing suicidal ideation or behaviors receives a certain number of points according to severity. The total score indicates the level of suicide risk (low, moderate, or high). It is important to follow the scoring protocol provided in the official MINI manual.

Usage

This tool isn't available on Mentaal. To use this questionnaire in your practice, you need a valid license. We invite you to send it directly from the publisher's website.
