MOCI

Maudsley Obsessive-Compulsive Inventory (MOCI)

The Maudsley Obsessive-Compulsive Inventory (MOCI) is a self-report questionnaire designed to measure the severity and presence of obsessive and compulsive symptoms typical of obsessive-compulsive disorder (OCD). It includes subscales targeting the main aspects of OCD, such as checking, cleaning, ordering, and doubting.

Number of questions	30 questions
Estimated duration	10 minutes
Language	English
Original name	Maudsley Obsessive-Compulsive Inventory
Target audience	Adults
Authors	H. J. Hodgson, I. Marks (1977)
Category	OCD

Scoring & interpretation

Each item is answered "True" or "False". The total score is the sum of the positive answers indicative of OCD symptoms. High scores suggest more pronounced symptoms. Specific cutoffs can be used to distinguish clinical disorders from the general population.
