

Structured Clinical Interview for DSM-5 Personality Disorders (SCID-5-PD)

The SCID-5-PD is a structured clinical interview designed to systematically assess the presence of personality disorders according to DSM-5 criteria. It provides a standardized method that allows clinicians to identify personality disorders, clarify their differential diagnosis, and collect precise clinical data for research or clinical practice.

Number of questions	106 questions
Estimated duration	60 minutes
Language	English
Original name	Structured Clinical Interview for DSM-5 Personality Disorders
Target audience	Adults
Authors	Michael B. First, Janet B.W. Williams, Rhonda S. Karg, Robert L. Spitzer (2015)
Category	General

Administer your questionnaires online

Send your patient a link: they answer from their phone or computer, and you receive the scored results by email.

Scoring & interpretation

Each personality disorder criterion is rated present, absent, or subthreshold based on the patient's answers. A diagnosis is made when a threshold number of criteria is met for a given disorder, following the instructions in the SCID-5-PD manual.

Usage

This tool isn't available on Mentaal. To use this questionnaire in your practice, you need a valid license. We invite you to send it directly from the publisher's website.
