

Structured Clinical Interview for DSM-5 (SCID-5)

The SCID-5 (Structured Clinical Interview for DSM-5) is a structured clinical interview tool for diagnosing mental disorders according to DSM-5 criteria. It is mainly used by clinicians to systematically assess psychiatric diagnoses. The SCID-5 covers a wide range of disorders, such as mood, anxiety, psychotic, and personality disorders, facilitating the identification of symptoms and the establishment of an accurate diagnosis.

Number of questions	300 questions
Estimated duration	90 minutes
Language	English
Original name	Structured Clinical Interview for DSM-5
Target audience	Adults, adolescents
Authors	Michael B. First, Janet B.W. Williams, Rhonda S. Karg, Robert L. Spitzer (2014)
Category	General

Administer your questionnaires online

Send your patient a link: they answer from their phone or computer, and you receive the scored results by email.

Scoring & interpretation

The patient's responses are collected during the semi-structured interview, and the clinician rates the presence/absence of symptoms following DSM-5 criteria. A diagnosis is based on how well the responses match the recommended criteria. A rating is made for each disorder explored.

Usage

This tool isn't available on Mentaal. To use this questionnaire in your practice, you need a valid license. We invite you to send it directly from the publisher's website.
