

Social Skills Inventory (SSI)

The SSI is a self-report tool designed to measure social skills in six domains: emotional expressivity, emotional sensitivity, emotional control, social expressivity, social sensitivity, and social control. It allows psychologists to assess individuals' strengths and weaknesses in interpersonal communication and social adjustment.

Number of questions	90 questions
Estimated duration	20 minutes
Language	English
Original name	Social Skills Inventory
Target audience	Adults, adolescents
Authors	Ronald E. Riggio (1986)
Category	Interpersonal issues

Administer your questionnaires online

Send your patient a link: they answer from their phone or computer, and you receive the scored results by email.

Scoring & interpretation

Each item is rated on a Likert-type scale ranging from 1 (strongly disagree) to 5 (strongly agree). Overall scores and scores for each subscale are calculated by adding the corresponding items. Specific cutoffs make it possible to interpret social skill levels on each dimension.

Usage

This tool isn't available on Mentaal. To use this questionnaire in your practice, you need a valid license. We invite you to send it directly from the publisher's website.

Are you a psychologist?

With Mentaal, get meaningful insights to support your patients.
