

Social-Emotional Learning (SSIS)

The SSIS is a scale used to assess social skills, problem behaviors, and academic performance in children and adolescents in school settings. It provides a multidimensional approach through questionnaires for teachers, parents, and students, thus giving a comprehensive view of young people's social interactions and skills. The tool is used to diagnose, plan interventions, and monitor progress over time.

Number of questions	46 questions
Estimated duration	20 minutes
Language	English
Original name	Social-Emotional Learning
Target audience	Children, adolescents
Authors	PhD S. Elliot; PhD F. Gresham (2021)
Category	Childhood

Administer your questionnaires online

Send your patient a link: they answer from their phone or computer, and you receive the scored results by email.

Scoring & interpretation

Each item is rated on a frequency scale, then the scores are totaled to obtain composite scores for social skills, problem behaviors, and academic achievement. Norms are used to interpret the results relative to the general population. The results guide the implementation of appropriate intervention programs.

Usage

This tool isn't available on Mentaal. To use this questionnaire in your practice, you need a valid license. We invite you to send it directly from the publisher's website.
