

Test of Everyday Attention (TEA)

The Test of Everyday Attention (TEA) is a neuropsychological assessment tool designed to measure various aspects of attention, including selective, divided and sustained attention. It is often used to assess attention deficits in adults following brain injury.

Number of questions	8 questions
Estimated duration	60 minutes
Language	English
Original name	Test of Everyday Attention
Target audience	Adults
Authors	Ian H. Robertson, Barbara R. M. Esslinger, Allan D. Baddeley (1994)
Category	General

Scoring & interpretation

TEA scoring consists of evaluating performance on different attention tasks, each measuring a specific aspect of attention. Scores are compared with norms to interpret the results.

Usage

This tool isn't available on Mentaal. To use this questionnaire in your practice, you need a valid license. We invite you to send it directly from the publisher's website.
