

Wechsler Adult Intelligence Scale (WAIS-IV)

The WAIS-IV is a clinical assessment that measures intelligence in adults. It helps identify an individual's cognitive strengths and weaknesses, diagnose intellectual deficits, and plan appropriate interventions.

Number of questions	10 questions
Estimated duration	90 minutes
Language	English
Original name	Wechsler Adult Intelligence Scale
Target audience	Adults
Authors	David Wechsler (2011)
Category	General

Administer your questionnaires online

Send your patient a link: they answer from their phone or computer, and you receive the scored results by email.

Scoring & interpretation

The WAIS-IV generates a Full Scale IQ score as well as four indices: Verbal Comprehension Index (VCI), Perceptual Reasoning Index (PRI), Working Memory Index (WMI), and Processing Speed Index (PSI). Each subtest is scored individually, and the scores are combined to obtain the indices and the Full Scale IQ.

Usage

This tool isn't available on Mentaal. To use this questionnaire in your practice, you need a valid license. We invite you to send it directly from the publisher's website.
