

Wechsler Intelligence Scale for Children (WISC-V)

The WISC-V is an intelligence scale specifically designed to assess the cognitive abilities of children and adolescents aged 6 to 16. This edition provides a more comprehensive assessment of the different components of intelligence, including verbal comprehension, perceptual reasoning, working memory and processing speed.

Number of questions	16 questions
Estimated duration	90 minutes
Language	English
Original name	Wechsler Intelligence Scale for Children
Target audience	Children and adolescents
Authors	David Wechsler (2014)
Category	Parenting

Administer your questionnaires online

Send your patient a link: they answer from their phone or computer, and you receive the scored results by email.

Scoring & interpretation

Scores are calculated for several indexes, such as the Verbal Comprehension Index, the Fluid Reasoning Index, the Working Memory Index and the Processing Speed Index. These indexes are then combined to produce a Full Scale IQ score, which is compared with established norms to provide an assessment of the child's cognitive abilities relative to their peers.

Usage

This tool isn't available on Mentaal. To use this questionnaire in your practice, you need a valid license. We invite you to send it directly from the publisher's website.
